Conference Focus

The 28th Annual National T&E Conference is focusing on proper role of T&E in our Defense System Requirements Process.

This paper will address

- What constitutes a set of valid (supportable), measureable (testable), realistic and achievable requirements?
- How can the T&E Community best engage the Defense Community at large?

Implications?

- The reference/superior knowledge sets:
 - Which sets are necessary and sufficient?
 - How are these sets formally structured?
- The subordinate knowledge sets:
 - Identify the requisite supporting disciplines (e.g., DT, OT, M&S, Human Dimension, Logistics, Reliability, Effectiveness)
 - How are these sets formally structured particularly so that their elements can be related one to another (i.e., horizontal linkage)?
- How are the superior and subordinate knowledge sets formally (i.e., vertically) linked?

▪ To meet these implied requirements, the many elements which comprise this problem set must be cast into a single framework!

‡ An alternate GOP view!

The Military Decision-Making Process [MDMP]

- We suggest that the MDMP should serve as the single integrating framework for all military analyses.
- Also that the reference (top-most) knowledge set(s) is constituted by the highest specific mission(s) developed under this construct.
- All subordinate knowledge sets be derived recursively from higher levels via expressed and implied tasks.

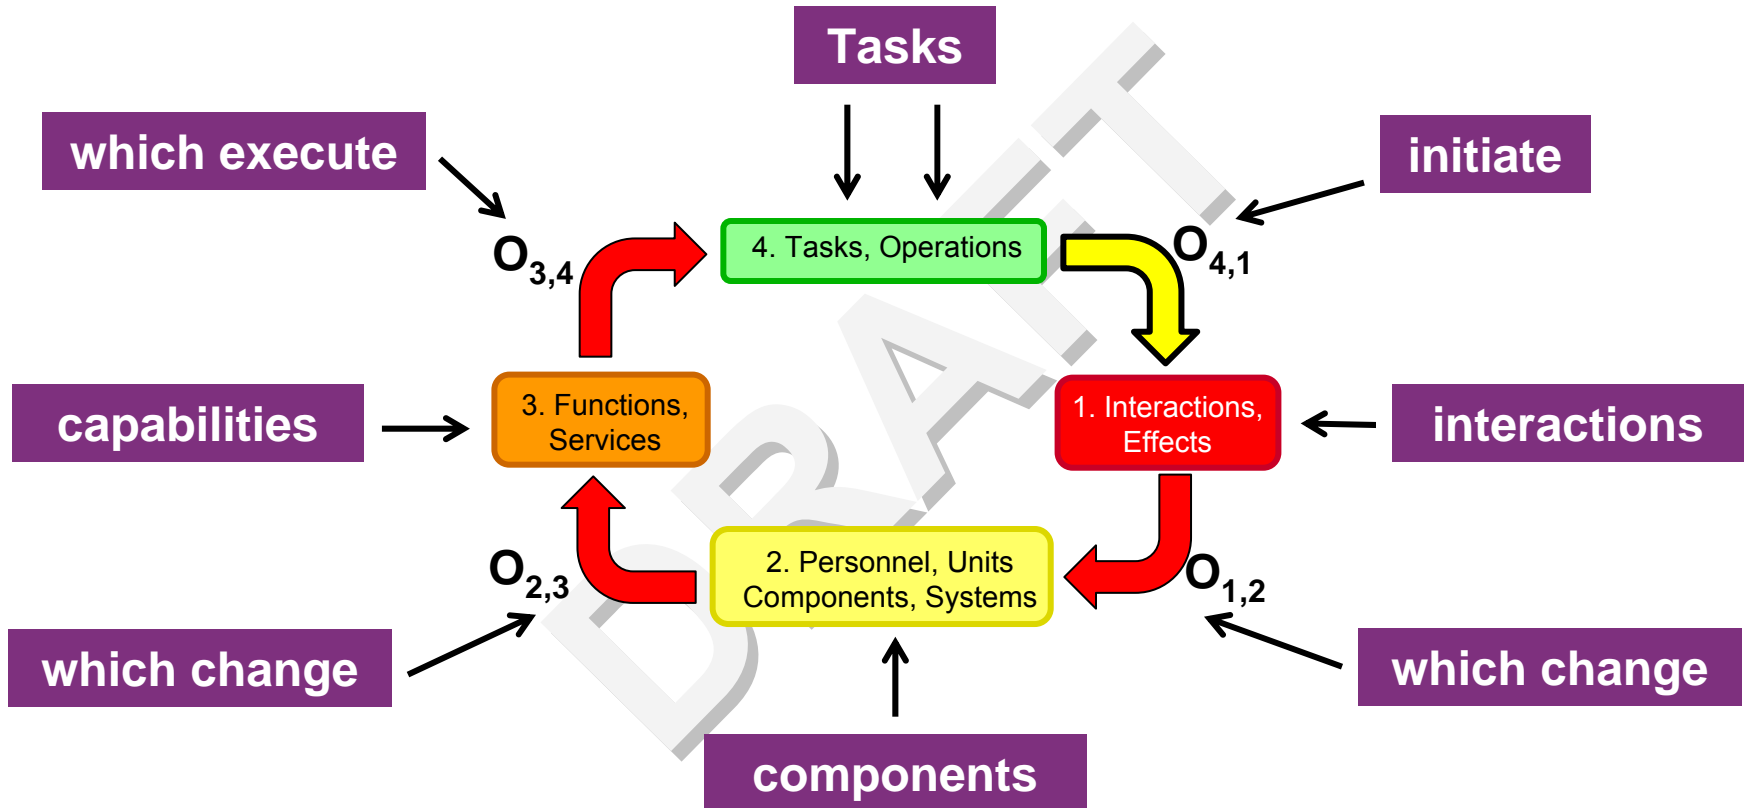

A Requirements Development Model

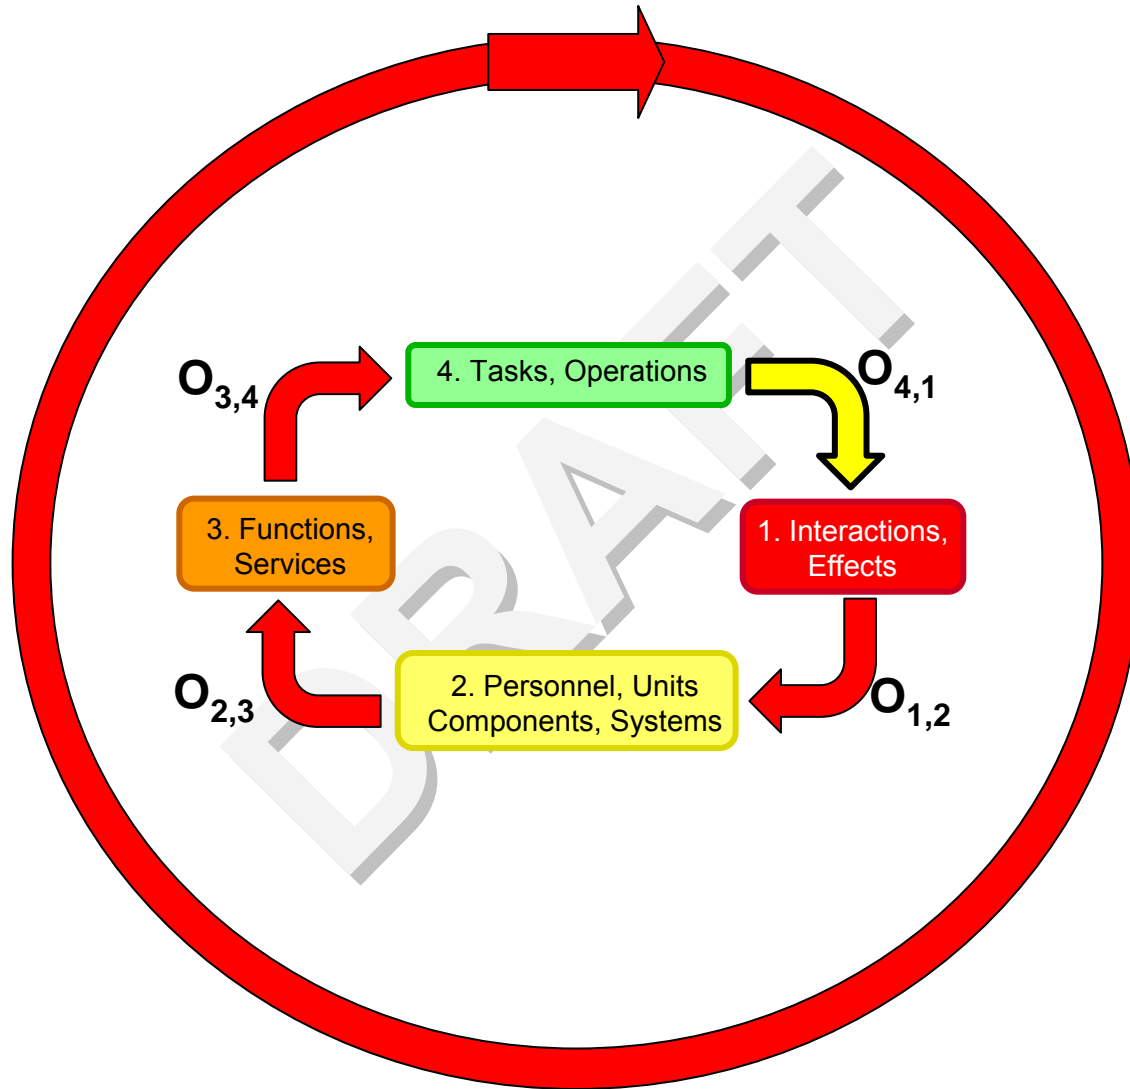

Formalizing the MDMP

- Over the past 14 years, considerable efforts have been expended to:
 - establish top-down linkages (per level of war),
 - establish horizontal linkages (e.g., System-of-Systems),
 - represent an OPFOR in addition to an OWNFOR so that multiple sides can be played against each other
 - reduce/eliminate ambiguity in representation by developing a formal structure for MDMP (including executable tasks and executing people/material) in order to
 - establish an executable framework (so that this can be automated)
- We call this the Missions and Means Framework (MMF)

- Fair Wear & Tear
- Fatigue
- Heat Stress
- . . .
- . . .

TOELs a Sequence of Task Commutations

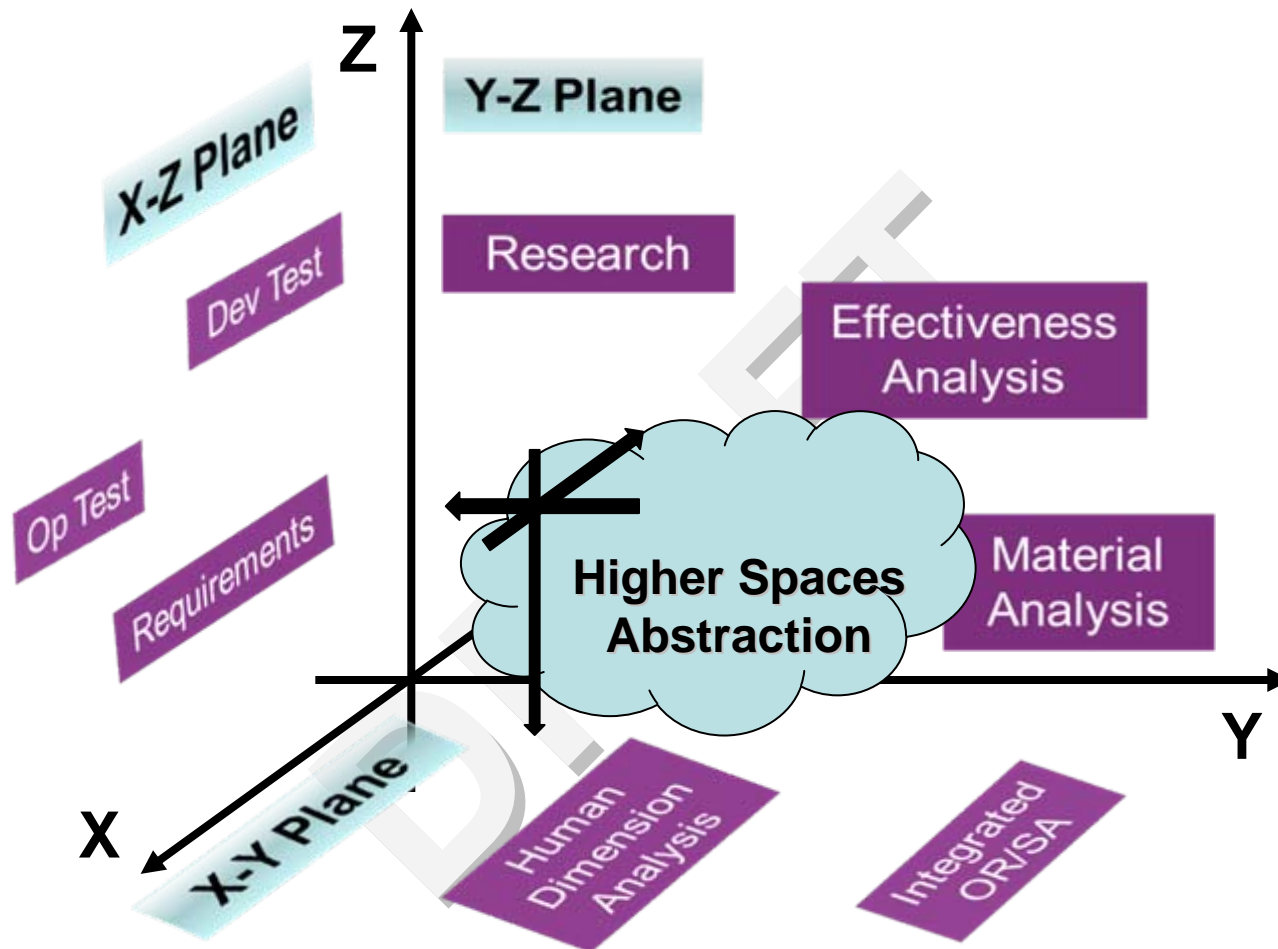

- Each event involves a task execution, i.e., one commutation
- With each execution, an interaction occurs, a material change state results, a new capability results, and the next task is/is not executed.
- The levels and operators can be combined endlessly to emulate interactions, frequency of interactions, geometry configuration, capability changes, and event-wise mission utility.
- Various disciplines can focus on the operator/level subsets of interest to them. Shared/exclusive issues are informed.

Example: Time-Ordered Event List

SEQ #	TIME	ACTIVITY
	0200-0400	PHASE I
P101		MCS A in AP Muldraugh and preparing for movement to OBJ APPLE
P102		C2V establishes ACA MAPLE, min alt 500 ft AGL, max alt 1000 ft AGL, ES860930, ET850050, ET880050, ES890940, eff 0200-0600
P103		C2V disseminates ACA MAPLE coordinates to CAB
P104		C2V launches UAV 1 from AP Muldraugh vic ES864943
P105		UAV 1 travels from AP Muldraugh (ES 864943) to perform route reconnaissance. Route ACPs: ES865945 (SP) to ET 883011 to ES866957 to ET875045 (OBJ APPLE)
P106		C2V monitors incoming data from UAV 1 visual and sensor feeds as it travels north along AXIS MAPLE
P107		MCS A plts conduct perimeter security in AP Muldraugh with their respective ARV-Rs
P108		MCS A plts perform precombat checks in preparation for movement north to OBJ APPLE
P109		UAV 1 remains on OBJ APPLE and conducts reconnaissance of TAI's 1 and 2. UAV 1 Route ACPs: ET876050, ET856040, ET880005, ET876050. UAV performs continuous loop on OBJ APPLE
P110		C2V monitors incoming data from UAV 1 visual and sensors feed as it conducts reconnaissance of OBJ APPLE
P111	Interaction 1	<i>UAV 1 detects suspected enemy activity vic TAI 2 with IR sensor</i>
P112		UAV 1 sends sensor report to C2V
P113		C2V receives IR sensor report of enemy activity vic TAI 2
P114		C2V updates the COP and informs MCS A
P115		Updated COP disseminated to higher and lower echelons
P116		C2V continues to monitor UAV 1 sensor feeds
P117		C2V tasks UAV 1 to stare at suspected enemy activity position to achieve better fidelity for target identification
P118		UAV 1 IFF sensor does not confirm friendly force
P119	Interaction 2	<i>UAV 1 detects elements of a suspected enemy INF squad vic ET 877036</i>
P120		UAV 1 transmits information to C2V
P121		C2V receives UAV 1 information and cannot confirm or deny enemy forces and continues to monitor activity
P122		UAV 1 maintains surveillance of TAI's 1 and 2 and OBJ APPLE
P123		MCS plts begin to assemble in order of march formation and prepare for tactical movement
P124		NLOS-C/M receives updated COP and plans targeting data for TAI 2.
P125		C2V and MCS A Hq prepares for movement toward OBJ APPLE
P126		MCS A plts task ARV-R 2 & 3 to move north along AXIS MAPLE with a limit of advance of 3km from plt main body and conduct reconnaissance. ARV-R 2 will travel route ES871948 (SP), ES873966, ES876987, ET875008, ET878018 ARV-R 3 will travel route ES862951 (

6. Context, Environment (Military, Civil, Physical, etc.)

JCIDS via MMF Representation [3/3]

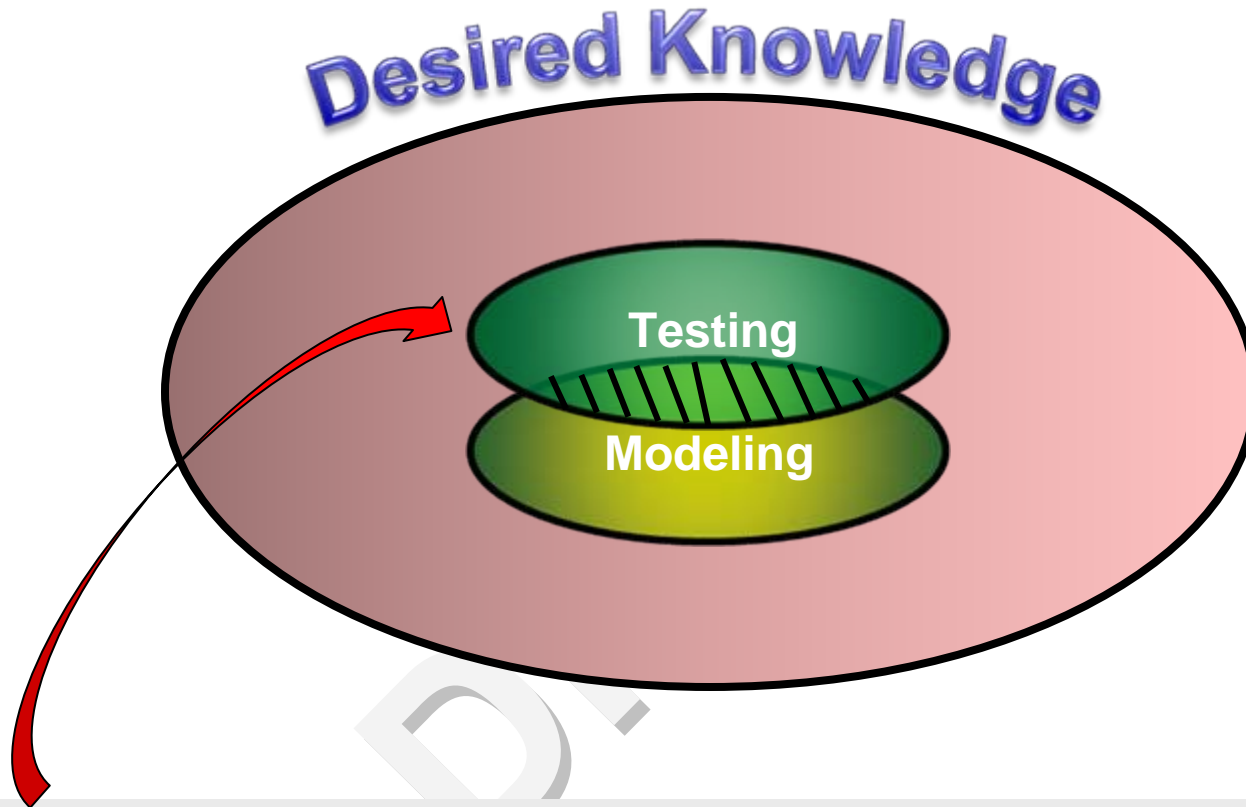

Outline [1/2]

- In this symposium, the focus has been directed to requirements and how other disciplines such as T&E and M&S can improve the acquisition process.
- A myriad of analytic fields have developed largely independently in what might be characterized as a bottom-up evolution. To wit:
 - An array of analytic areas characterized by collections of metrics in which sharing or exclusion across areas is not known.
 - Where state changes to systems or components of systems (i.e., due to invoked damage or repair) are conflated with system performance and further conflated with system effectiveness.
 - Where mission context is absent, making effectiveness estimates ambiguous at best.
- Clearly, the many elements which comprise this problem set must be cast into a single framework capable of supporting the full dimensionality not only of requirements, but research, DT/OT activities, materiel, human dimension, and effectiveness analyses.

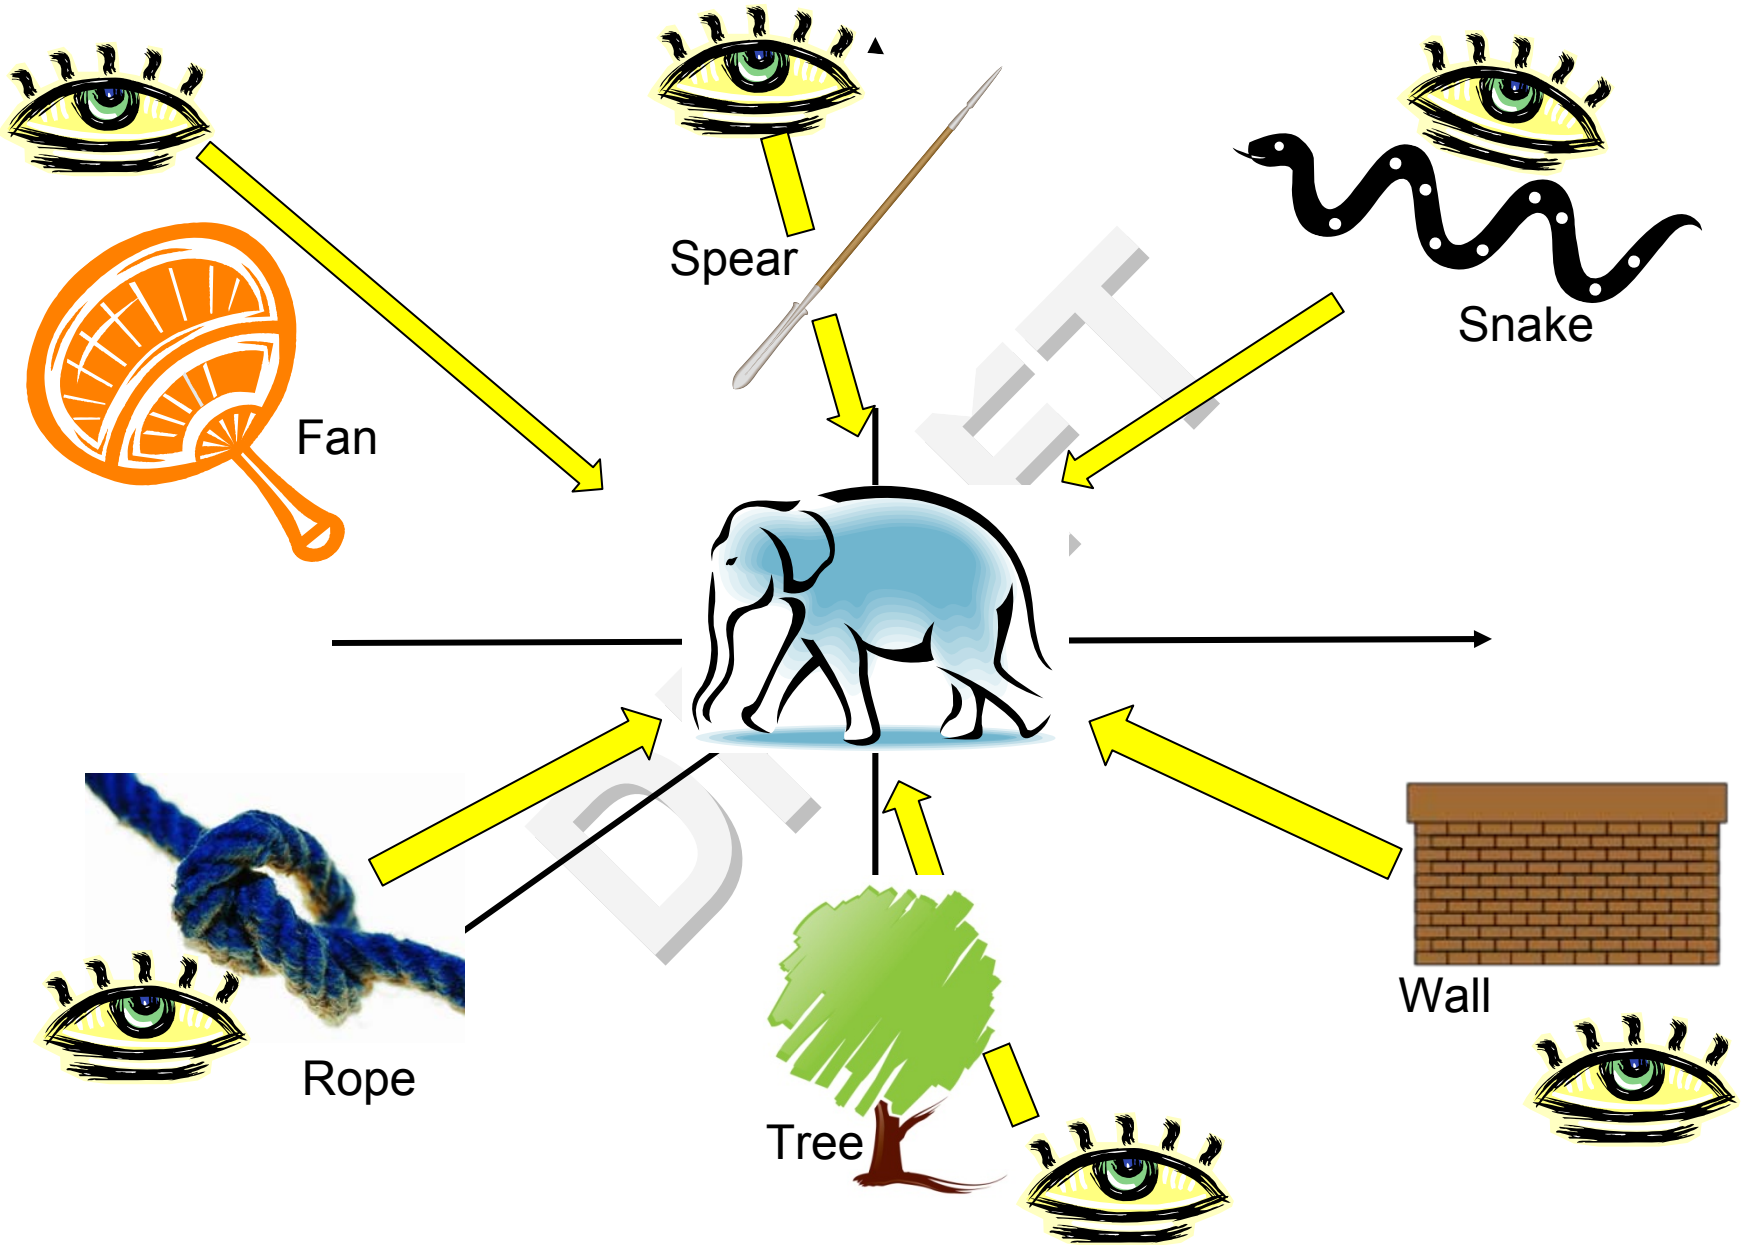

Knowledge

Note:

- The logical intersection is a small subset of the logical union
- The intersection is the only domain in which Validation can take place!

The Blind Men and the Elephant

Outline [1/2]

- In this symposium, the focus has been directed to requirements and how other disciplines such as T&E and M&S can improve the acquisition process.
- A myriad of analytic fields have developed largely independently in what might be characterized as a bottom-up evolution. To wit:
 - An array of analytic areas characterized by collections of metrics in which sharing or exclusion across areas is not known.
 - Where state changes to systems or components of systems (i.e., due to invoked damage or repair) are conflated with system performance and further conflated with system effectiveness.
 - Where mission context is absent, making effectiveness estimates ambiguous at best.
- Clearly, the many elements which comprise this problem set must be cast into a single framework capable of supporting the full dimensionality not only of requirements, but research, DT/OT activities, materiel, human dimension, and effectiveness analyses.

Outline [1/2]

- How can the T&E Community support the Requirements Process?
- What constitute valid, measureable (i.e. testable), realistic and achievable requirements?
- How can multiple disciplines be used in combination to effect acquisition-related decisions?
- Clearly, the many elements which comprise this problem set must be cast into a single framework capable of supporting the full dimensionality not only of requirements, but research, DT/OT activities, materiel, human dimension, and effectiveness analyses.

Outline [2/2]

- A single paradigm is capable of supporting all of these seemingly disparate focus areas; it is called the Military Decision Making Process (MDMP) and has been a part of the warfighters lexicon and practice for years
- Over the past 14 years, considerable efforts have been expended to:
 - developing a formal structure for MDMP in order to reduce/eliminate ambiguity in representation
 - establish top-down linkages (per level of war),
 - establish horizontal linkages (e.g., System-of-Systems),
 - establish an executable framework (so that this can be automated), and
 - represent an OPFOR in addition to an OWNFOR so that multiple sides can be played against each other
- We call this the Missions and Means Framework (MMF)
- MMF (read the MDMP) has applicability to a wide range of defense-related analyses
- MMF (read the MDMP) relates material/people to performance to effectiveness to event initiation, to interactions with material/people, to . . .

Top-down vice bottom-up strategies

Clearly, the many elements which comprise this problem set must be cast into a single framework capable of supporting the full dimensionality not only of requirements, but research, DT/OT activities, materiel, human dimension, and effectiveness analyses.

Advanced Concepts and Requirements (ACR), Research, Development & Acquisition (RDA), and Training Exercises and Military Operations (TEMO) represent three domains which do not map fully to a superset representation

The MDMP as the Center Piece of Analysis [1/2]

Purpose: Provide a methodology for explicitly specifying the military mission and quantitatively evaluating the mission utility of alternative warfighting DOTMLPF services and products.

Objective: Provide a disciplined procedure to explicitly specify the mission, allocate means, and assess mission accomplishment by:

- Unifying the warfighter, engineer, and comptroller understanding of missions and means
- Accounting for traditional testing and evaluation factors and traditional warfighter expertise factors that constitute mission success.
- Being sufficiently credible, timely, and affordable to make hard decisions that stay made.
- Being consistent, concise, repeatable, and scalable.
- Providing a disciplined process to implement the Defense Secretary's transformation guidance and associated acquisition reform.

Formalizing the MDMP Structure

- Over the past 14 years, considerable efforts have been expended to:
 - establish top-down linkages (per level of war),
 - establish horizontal linkages (e.g., System-of-Systems),
 - represent an OPFOR in addition to an OWNFOR so that multiple sides can be played against each other
 - reduce/eliminate ambiguity in representation by developing a formal structure for MDMP (including executable tasks and executing people/material) in order to
 - establish an executable framework (so that this can be automated)
- We call this the Missions and Means Framework (MMF)
- MMF (read the MDMP) has applicability to a wide range of defense-related analyses
- MMF (read the MDMP) relates material/people to performance to effectiveness to event initiation, to interactions with material/people, to . .
